

RELEASE NOTES

Feature Introduced (New & Enhanced) & Bug Fixes

ARAVALI 1

13TH JUNE, 2025

Feature Improvements (1/3)

DESCRIPTION	STATUS
Release package Solv Requirements	Done 
Release note pdf include jira ticket links	Done 
Implement Search Functionality Across Key Screens to Improve Data Accessibility	Done 
Show Progress Screen While Deleting Secrets and Config Maps for Better Visibility	Done 
Improve Git Repository Error Visibility on Build Page	Done 
Enable “Re-run” Option for All Jobs and Stages, Including Snow Job	Done 
Enable Cloning of Specific Commit SHA in BuildPiper Pipelines	Done 
Enhancement of scan tool report publish.	Done 
BP to have a feature to determine how many users have logged to the Buildpiper	Done 
Implement Common error Component across buildpiper	Done 
Buildpiper to support Kubernetes version 1.32	Done 

Bugs Resolved (1/2) (Critical Fixes)

BUGS	STATUS
Custom changes have been enabled in the BP for the production environment	Fixed 
New Services Default to BuildPiper Container Registry Instead of Provided Client ECR	Fixed 
Job Executors Not Visible After BuildPiper Upgrade in ApnaMart	Fixed 
Intermittent White Blank Screens in BuildPiper Despite Data Presence	Fixed 
Details Not Displaying in Job Execution History When Applying Filters on App, Environment Type, or Both for V3 Applications.	Fixed 
The message shown while deleting any module could be clearer—'entity' should be replaced with the specific module name	Fixed 
Job is Running but Shown as "Queued" in Pipeline View	Fixed 
REST API Job Status Incorrectly Shown as "Queued" While Running in Pipeline	Fixed 
Incorrect Date Range Displayed in DORA and Velocity Insights Overview Dialogs	Fixed 

Bugs Resolved (2/2) (Critical Fixes)

BUGS	STATUS
User cannot modify the default policy template , need option to copy the whole default policy template and make changes	Fixed 
If activity_status is null in history the UI gives Something Went Wrong	Fixed 
Text on service configuration screen is wrong	Fixed 
Service Tag Mapping and Service Branch Mapping Not Working Independently — Impacts Auto Detection	Fixed 
Service Tag Mapping and Service Branch Mapping Not Working Independently — Impacts Auto Detection	Fixed 
The overlay volume in Docker is consuming the BP VM's disk space.	Fixed 
when we create a primary build, new cors are impacted.	Fixed 
Buildpiper aws-cli binary impacting deployment roll-out validation	Fixed 

The new enhancement enables users to generate the release package directly through the release ticket in JIR

NUE

Release note pdf include jira ticket links

Enhancement

The release notes have been enhanced to include clickable JIRA tickets, allowing users to navigate directly to the corresponding JIRA ticket.

PDF FILE

 RELEASE 1.2.3.10

Release Description

BuildPiper supports following jobs - Build, Deploy, Promote, Rollback, Apl call, Jira Integration, Deploy, Config Maps, Deploy Secrets. Each job has default set of steps via which the jobs are configured.

Jira Stories

-  3423: [FR: Internal] Dorametrics Code fix QA_DONE
-  3424: [FR: Backend] Admin Panel Backend fix QA_DONE
<https://buildpiper.atlassian.net/browse/BP-3424?isEligibleForUserSurvey=true>
-  3429: [FR: Internal] UI/UX Revamp of Buildpiper Overview Page QA_DONE
